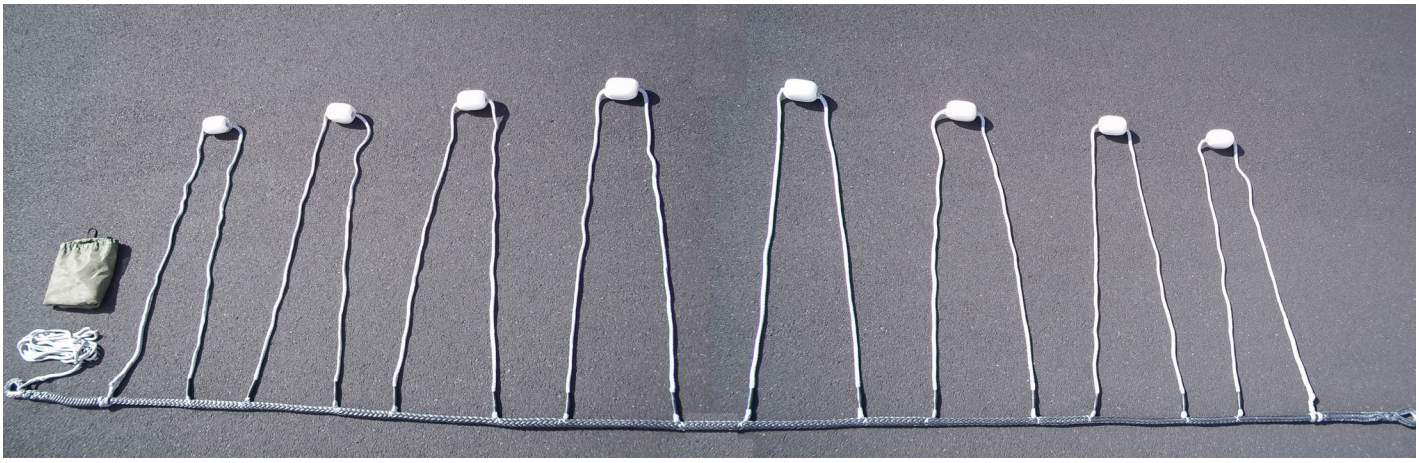
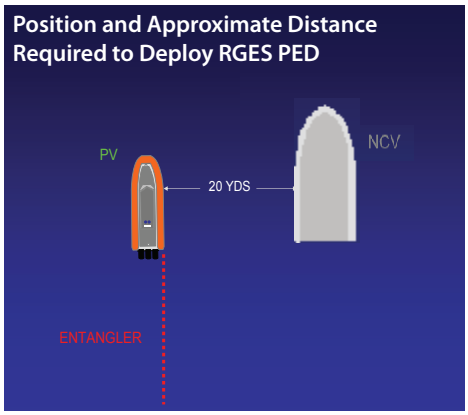
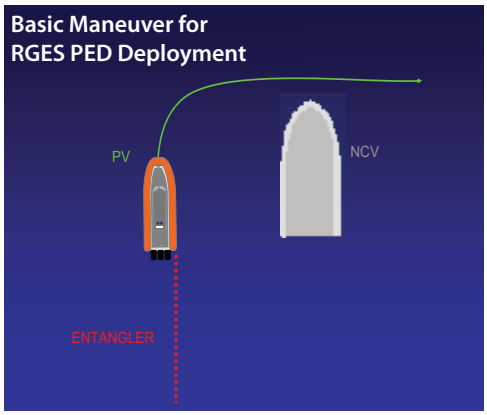
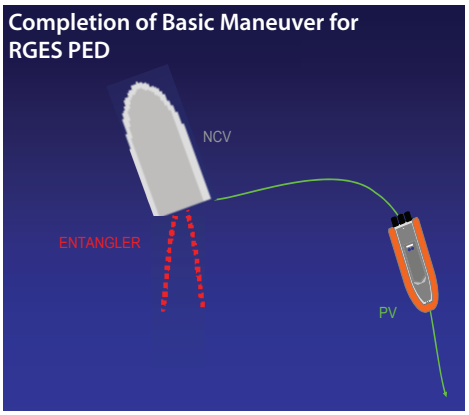
RGES
RUNNING GEAR ENTANGLEMENT SYSTEM

Kit 488 - RGES PED Kit









Description

The Kit 488 RGES PED (Propeller Entanglement Device) is used for larger "V-hulled" vessel interdiction.

The RGES PED offers maximum scalability and will stop and/or impede the progress of a displacement hull vessel of virtually any size. The system has been successfully tested on vessels with up to Twin 785 HP inboard diesel engines at 25 knots.

The RGES PED is deployed in-tow from a small assault craft directly across the path of the target vessel.

ResQmax, Inc. can also provide design services to customize the RGES PED to a specific application.

Shipping dimensions depend on actual PED configuration.

Technical Specifications

Payload Specifications:

Payload Length: Kit 488 - 40 ft / 12m
Kit 488L - 80 ft / 24m

Payload Tensile Strength:
Loop Chord - 51,400 lbs / 23,315 kg
Lower Chord - 110,000 lbs / 49,895 kg

Note: RGES PED can be easily repacked in the field without need for special equipment.

Stopping Capabilities:

Single and multi engine configurations up to Twin 785 HP inboard diesel engines.

KIT CONTENTS:

Part #48801 (48801L) - RGES PED Payload
Part #48802 - Tending Line (40ft / 12m)
Part #48803 - Stainless Steel Bow Shackle
Part #48804 (48804L) - Carry Bag
Part #48805 - Operations Manual
